International Workshop on Bio-Imaging and Visualization for Patient-Customized Simulations, BIVPCS 2017

Imaging and Visualization are among the most dynamic and innovative areas of research of the past few decades. Justification of this activity arises from the requirements of important practical applications such as the visualization of computational data, the processing of medical images for assisting medical diagnosis and intervention, and the 3D geometry reconstruction and processing for computer simulations.

Currently, due to the development of more powerful hardware resources and mathematical and physical methods, researchers have been incorporating advanced computational techniques to derive sophisticated methodologies that can better solve the problems encountered. Consequently, effective methodologies have been proposed, validated, and in some cases integrated into commercial software for computer simulations.

The main goal of this MICCAI workshop on Bio-Imaging and Visualization for Patient-Customized Simulations is to provide a platform for communication among specialists from complementary fields such as signal and image processing, mechanics, computational vision, mathematics, physics, informatics, computer graphics, bio-medical practice, psychology, and industry. Another important objective of this MICCAI workshop is to establish a viable connection between software developers, specialist researchers, and applied end-users from diverse fields related to signal processing, imaging, visualization, biomechanics, and simulation.

This book contains the full papers presented at the MICCAI 2017 workshop on Bio-Imaging and Visualization for Patient-Customized Simulations (BIVPCS 2017), which was organized under the auspices of the 20th International Conference on Medical Image Computing and Computer Assisted Intervention 2017, held in Quebec City, Quebec, Canada, during September 10–14, 2017. BIVPCS 2017 brought together researchers representing several fields, such as biomechanics, engineering, medicine, mathematics, physics, and statistics. The works included in this book present and discuss new trends in those fields, using several methods and techniques, including the finite element method, muscle mechanics, computational fluid dynamics, convolutional neural networks, similarity metrics, histograms of oriented gradients, local binary pattern descriptors, non-negative matrix factorization, local cumulative spectral histograms, partial least squares regression, atlas, level-set thresholding, k-means clustering, deformable models, and sensors calibration, in order to address more efficiently different and timely applications involving signal and image acquisition, image processing and analysis, image segmentation, image classification, image reconstruction, image registration, 2D-3D reconstruction, computer simulation, image based modelling, image based diagnosis, surgery planning and simulation, and therapy planning.

The editors wish to thank all the BIVPCS 2017 authors and members of the Program Committee for sharing their expertise, and also the MICCAI Society for having hosted and supported the workshop within MICCAI 2017.

International Workshop on Point-of-Care Ultrasound, POCUS 2017

Point-of-Care Ultrasound (POCUS) encompasses automated ultrasound image and RF data analysis algorithms, rugged ultrasound probes, robust tracking hardware, and specialized user interfaces including augmented reality systems. The goal of a POCUS system is to guide novice users to properly manipulate a ultrasound probe and interpret the acquired data. The output of a POCUS system is typically a quantitative measure or an automated diagnosis, not a B-mode image. POCUS applications range from detecting intra-abdominal bleeding at the scene of an accident to in-home monitoring of liver health. The POCUS workshop featured invited and accepted presentations, live demonstrations, and a panel discussion.

Contents

International Workshop on Bio-Imaging and Visualization for Patient-Customized Simulations, BIVPCS 2017

Cortical Envelope Modeling for Interactive Patient-Customized Curvilinear Reformatting in the Native Space	3
<i>Wallace Souza Loos, Clarissa Lin Yasuda, Fernando Cendes, and Shin-Ting Wu</i>	
Simulation of Patient-Specific Deformable Ultrasound Imaging in Real Time	11
<i>Mafalda Camara, Erik Mayer, Ara Darzi, and Philip Pratt</i>	
A Hybrid CNN Feature Model for Pulmonary Nodule Differentiation Task	19
<i>Tingting Zhao, Huafeng Wang, Lihong Li, Yifang Qi, Haoqi Gao, FangFang Han, Zhengrong Liang, Yanmin Qi, and Yuan Cao</i>	
A 3D Ultrasound Informed Model of the Human Gastrocnemius Muscle	27
<i>M. Alipour, K. Mithraratne, R.D. Herbert, and J. Fernandez</i>	
Atlas-Based 3D Intensity Volume Reconstruction of Musculoskeletal Structures in the Lower Extremity from 2D Calibrated X-Ray Images	35
<i>Weimin Yu and Guoyan Zheng</i>	
Automatic Liver Lesion Segmentation in CT Combining Fully Convolutional Networks and Non-negative Matrix Factorization	44
<i>Shenhai Zheng, Bin Fang, Laquan Li, Mingqi Gao, Yi Wang, and Kaiyi Peng</i>	
Constructing Detailed Subject-Specific Models of the Human Masseter	52
<i>C. Antonio Sánchez, Zhi Li, Alan G. Hannam, Purang Abolmaesumi, Anne Agur, and Sidney Fels</i>	
MRI-Based Heart and Torso Personalization for Computer Modeling and Simulation of Cardiac Electrophysiology	61
<i>Ernesto Zacur, Ana Mincholé, Benjamin Villard, Valentina Carapella, Rina Ariga, Blanca Rodriguez, and Vicente Grau</i>	

Rapid Prediction of Personalised Muscle Mechanics: Integration with Diffusion Tensor Imaging	71
<i>J. Fernandez, K. Mithraratne, M. Alipour, G. Handsfield, T. Besier, and J. Zhang</i>	
Approaches to Brain Tissue Quantification with Comparison on Supporting the Detection of Age-Related Dementia in MRI	78
<i>Peifang Guo</i>	
Relating Atrial Appendage Flow Stasis Risk from Computational Fluid Dynamics to Imaging Based Appearance Paradigms for Cardioembolic Risk	86
<i>Soroosh Sanatkhanian and Prahlad G. Menon</i>	
Deformable Multi-material 2-Simplex Surface Mesh for Intraoperative MRI-Ready Surgery Planning and Simulation, with Deep-Brain Stimulation Applications	94
<i>T. Rashid, S. Sultana, G.S. Fischer, J. Pilitsis, and M.A. Audette</i>	
International Workshop on Point-of-Care Ultrasound: Algorithms, Hardware, and Applications, POCUS 2017	
Combining Automated Image Analysis with Obstetric Sweeps for Prenatal Ultrasound Imaging in Developing Countries	105
<i>Thomas L.A. van den Heuvel, Hezkiel Petros, Stefano Santini, Chris L. de Korte, and Bram van Ginneken</i>	
Automatic Estimation of the Optic Nerve Sheath Diameter from Ultrasound Images.	113
<i>Samuel Gerber, Maeliss Jallais, Hastings Greer, Matt McCormick, Sean Montgomery, Bradley Freeman, Deborah Kane, Deepak Chittajallu, Neal Siekierski, and Stephen Aylward</i>	
Achieving Fluid Detection by Exploiting Shadow Detection Methods	121
<i>Matthias Noll, Julian Puhl, and Stefan Wesarg</i>	
A Probe-Camera System for 3D Ultrasound Image Reconstruction	129
<i>Koichi Ito, Kouya Yodokawa, Takafumi Aoki, Jun Ohmiya, and Satoshi Kondo</i>	
Ultrasound Augmentation: Rapid 3-D Scanning for Tracking and On-Body Display	138
<i>Maeliss Jallais, Hastings Greer, Sam Gerber, Matt McCormick, Deepak Chittajallu, Neal Siekierski, and Stephen Aylward</i>	

Overall Proficiency Assessment in Point-of-Care Ultrasound Interventions: The Stopwatch is not Enough	146
<i>Matthew S. Holden, Zsuzsanna Keri, Tamas Ungi, and Gabor Fichtinger</i>	
A Novel Ultrasound Imaging Method for 2D Temperature Monitoring of Thermal Ablation	154
<i>Chloé Audigier, Younsu Kim, and Emad Boctor</i>	
Author Index	163
