New Developments on Computational Methods and Imaging in Biomechanics and Biomedical Engineering

Series: Lecture Notes in Computational Vision and Biomechanics

- Describes innovative computational methods for studying medical disorders
- Reports on cutting-edge imaging and visualization techniques in biomedicine
- Helps bridging the gap between research and clinical practice

This book gathers selected, extended and revised contributions to the 15th International Symposium on Computer Methods in Biomechanics and Biomedical Engineering (CMBBE2018), and the 3rd Conference on Imaging and Visualization, which took place on 26-29 March, 2018, in Lisbon, Portugal. The respective chapters highlight cutting-edge methods, e.g. new algorithms, image analysis techniques, and multibody modeling methods; and new findings obtained by applying them in biological and/or medical contexts. Original numerical studies, Monte Carlo simulations, FEM analyses and reaction-diffusion models are described in detail, together with intriguing new applications. The book offers a timely source of information for biologists, engineers, applied mathematicians and clinical researchers working on multidisciplinary projects, and is also intended to foster closer collaboration between these groups.
