# Keynotes Index

Code	Title
0062	HIGHLY SELECTIVE ADSORPTIVITIES OF POROUS CARBONS FOR WATER AND OXYGEN ISOTOPES <a href="#">ONO, YUJI</a> - KUMAR, SANJEEV - FUTAMURA, RYUSUKE - VALLEJOS-BURGOS, FERNANDO - SAGISAKA, KENTO - HATTORI, YOSHIYUKI - GOGOTSI, YURY - KANEKO, KATSUMI
0071	A MOLECULAR DYNAMICS STUDY ON THE TRIBOLOGICAL PROPERTIES OF DIAMOND-LIKE CARBON IN HYDROGEN GAS ENVIRONMENT <a href="#">WANG, YANG</a> - XU, JINGXIANG - OOTANI, YUSUKE - HIGUCHI, YUJI - OZAWA, NOBUKI - KUBO, MOMOJI
0078	ELECTROCHEMICAL BEHAVIORS OF LITHIUM INTERCALATION/DE-INTERCALATION INTO/OUT-OF BORON/CARBON MATERIALS AS ANODES OF LIBS <a href="#">KAWAGUCHI, MASAYUKI</a> - SUGISAKI, SEIYA - KOUGE, YUKAKO - GOTOH, KAZUMA
0087	ELECTROCHEMICAL PERFORMANCE OF N-DOPED SUPERPOROUS ACTIVATED CARBONS IN NON-CONVENTIONAL ELECTROLYTES <a href="#">MOSTAZO-LÓPEZ, MARÍA JOSÉ</a> - KRUMMACHER, JAKOB - BALDUCCI, ANDREA - MORALLÓN, EMILIA - CAZORLA-AMORÓS, DIEGO
0089	JUST ADD WATER AND TABLE SALT: NEW PERSPECTIVES ON THE ELECTROCHEMICAL EXFOLIATION OF HIGH QUALITY GRAPHENE <a href="#">MUNUERA, JOSE MARÍA</a> - PAREDES, JUAN IGNACIO - ENTERRÍA, MARINA - PAGÁN, ANA - VILLAR-RODIL, SILVIA - PEREIRA, MANUEL - FERNANDO RIBEIRO - FIGUEIREDO, JOSÉ LUIS - CENIS, JOSÉ LUIS - MARTÍNEZ-ALONSO, AMELIA - TASCÓN, JUAN MANUEL DIEZ
0111	FLOW PATTERN ANALYSIS OF THE HORIZONTAL TUBE FURNACE FOR THE CNT FIBER SYNTHESIS <a href="#">LEE, TAESŬON</a> - UM, TAEWOONG - LEE, SUNG-HYUN - KANG, IN SEOK - LEE, KUN-HONG
0113	ELUCIDATION OF RELATIONSHIPS BETWEEN CARBON STRUCTURE AND ANION INTERCALATION IN DUAL-ION BATTERIES <a href="#">ANDREAS, HECKMANN</a> - OLGA, FROMM - UTA, RODEHORST - MARTIN, WINTER - TOBIAS, PLACKE
0114	DEVELOPMENT OF NOVEL PAN-BASED ACTIVATED CARBON FIBERS <a href="#">YOSHIKAWA, MASAAKI</a> - HAYASHI, JUNICHI
0118	3D PRINTED GUIDELINES FROM NANOFIBRILLATED CELLULOSE/CARBON NANOTUBES INKS FOR APPLICATION IN NEURAL TISSUE ENGINEERING <a href="#">KUZMENKO, VOLODYMYR</a> - KARABULUT, ERDEM - PERNEVIK, ELIN - ENOKSSON, PETER - GATENHOLM, PAUL
0129	COMBINATION OF TRANSITION METAL WITH NANOCARBON MATERIALS: PROMISING CATALYSTS FOR LIQUID PHASE ORGANIC REACTIONS <a href="#">ZHAO, QINGSHAN</a> - WU, MINGBO - LI, XINXIN
0138	CARBIDE-DERIVED CARBON BEADS WITH TUNABLE NANOPORES FROM CONTINUOUSLY PRODUCED POLYSILSESQUOXANES FOR ENERGY STORAGE DEVICES <a href="#">KRÜNER, BENJAMIN</a> - ODENWALD, CHRISTINA - KICKELBICK, GUIDO - PRESSER, VOLKER
0140	PETROLEUM COKE-BASED CARBON NANOMATERIALS FOR ELECTROCATALYSIS <a href="#">WU, MINGBO</a>
0163	NUMERICAL EVALUATION OF THE MIXED-MODE INTERFACIAL FRACTURE OF C/C COMPOSITES BY USING A ZERO-THICKNESS COHESIVE APPROACH <a href="#">QI, LEHUA</a> - CHAO, XUJIANG - LI, HEJUN
0190	NANOPOROUS CARBONS FOR SOLAR FUELS PRODUCTION <a href="#">MATOS, JUAN</a> - OCARES-RIQUELME, JOSE - POON, PO S. - GARCÍA, XIMENA - TITIRICI, MARÍA M - ANIA, CONCHI O.
0197	EMPHASIZING THE ROLE OF CARBON PORES IN ELECTROCATALYSIS <a href="#">BANDOSZ, TERESA J</a>
0215	THE STUDY TOWARD TO THE REALIZATION OF SUSTAINABLE CFRTP HAVING BOTH HIGH MECHANICAL PROPERTIES AND RECYCLABILITY <a href="#">IRISAWA, TOSHIHIRA</a> - HASHIMOTO, RYO - NAGAO, NAOAKI - TANABE, YASUHIRO - ARAI, MASAHIRO
0257	MECHANISM OF THE OXYGEN REDUCTION REACTION (ORR) ON GRAPHENE-BASED MATERIALS: FURTHER INSIGHTS FROM QUANTUM CHEMISTRY <a href="#">RADOVIC, LJUBISA R</a>
0290	CARBON MATERIALS AS CATALYST SUPPORTS AND CO-CATALYSTS FOR BIOMASS UPGRADING PROCESSES <a href="#">GARCÉS, DIEGO</a> - FABA, LAURA - DIAZ, EVA - ORDÓÑEZ, SALVADOR
0293	HIGH-VOLTAGE DURABILITY AND DEGRADATION MECHANISM OF SEAMLESS ACTIVATED-CARBON ELECTRODE FOR ELECTROCHEMICAL CAPACITORS <a href="#">SHIRAIISHI, SOSHI</a> - TAGAYA, TOMOMI - OYAMA, RYOHEI - HATAHEYAMA, YOSHIKIYO - TSUKADA, HIDEHIKO
0315	NANOGRAPHENES BY SOLVENT-FREE SYNTHESSES - THE MECHANOCHEMICAL SCHOLL REACTION <a href="#">GRÄTZ, SVEN</a> - BEYER, DOREEN - TKACHOVA, VALERIYA - HELLMANN, SARAH - BERGER, REINHARD - FENG, XINLIANG - BORCHARDT, LARS

Code	Title
0325	CO2 CAPTURE BY CHEMICAL LOOPING PROCESSES USING C-FUELS <a href="#">GARCÍA LABIANO, FRANCISCO</a> - IZQUIERDO, MARIA TERESA - DE DIEGO, LUIS F. - GAYÁN, PILAR - ABAD, ALBERTO - MENDIARA, TERESA - ADÁNEZ, JUAN
0345	EELS MEASUREMENT OF GRAPHITIZED ULTRATHIN CARBON FILMS <a href="#">YOSHIZAWA, NORIKO</a> - SONEDA, YASUSHI - KODAMA, MASAYA
0364	FROM NANO- TO MACRO-SCALE: HYBRID MAGNETIC CARBON NANOCOMPOSITES AS A TOOL FOR CATALYTIC WET PEROXIDE OXIDATION <a href="#">RIBEIRO, RUI S.</a> - SILVA, ADRIÁN M.T. - FARIA, JOAQUIM L. - GOMES, HELDER T.
0365	CHARGE-DISCHARGE PROPERTIES OF SN02-EMBEDDED NANOPOROUS CARBONS IN ALL-SOLID-STATE LITHIUM ION BATTERY SYSTEM <a href="#">NOTOHARA, HIROO</a> - URITA, KOKI - MORIGUCHI, ISAMU
0375	TiO2-CARBON HYBRID PHOTOCATALYSTS FOR THE ELIMINATION OF POLLUTANTS IN LIQUID PHASE <a href="#">AMORÓS-PÉREZ, ANA</a> - CANO-CASANOVA, LAURA - OUZZINE, MOHAMMED - LILLO-RÓDENAS, MARÍA ÁNGELES - ROMÁN-MARTÍNEZ, MARÍA CARMEN - KELLER, NICOLAS
0377	CARBON-COUPLED PLASMONIC SENSORS: FROM QUANTUM COUPLING TO SUBWAVELENGTH RESONANT STRAIN SENSORS <a href="#">ARAMESH, MORTEZA</a> - TIEFENAUER, RAPHAEL - VÖRÖS, JANOS
0387	CARBON NANOMATERIALS AS STRUCTURAL DIRECTORS FOR THE PREPARATION OF INTERCONNECTED POROUS CARBON NETWORKS <a href="#">ania, conchi</a> - GOMIS-BERENGUER, ALICIA - CALZADA, M DOLORES - casanova, ana
0409	MATERIAL AND PROCESSING VARIABLES AFFECTING THE PROPERTIES OF CARBON BONDED CARBON FIBER INSULATION <a href="#">GALLEGO, NIDIA</a> - ROMANOSKI, GLENN - LACH, KYLE - CONTESCU, CRISTIAN - ADHIKARI, SHIBA - CLARK, ASHLI - ULRICH, GEORGE
0431	ROSIN-MEDIATED ULTRACLEAN TRANSFER OF GRAPHENE AND RELATED TWO-DIMENSIONAL MATERIALS <a href="#">DU, JINHONG</a> - ZHANG, DINGDONG - REN, WENCAI - CHENG, HUI-MING
0451	MODELING CELLULOSE CONVERSION TO KEROGEN: A PATHWAY OF REVERSIBLE RARE EVENTS <a href="#">VALDENAIRE, PIERRE-LOUIS</a> - PELLENG, ROLAND - ULM, FRANZ-JOSEF - LEYSSALE, JEAN-MARC
0478	AGEING MECHANISMS OF SUPERCAPACITOR CARBON ELECTRODES DETERMINED BY ELECTROCHEMICAL ON-LINE MASS SPECTROMETRY <a href="#">BEGUIN, FRANÇOIS</a> - PRZYGOCKI, PATRYK - ABBAS, QAMAR - RATAJCZAK, PAULA
0480	THE STATE OF WATER ADSORBED IN CARBON NANOPORES <a href="#">LÁSZLÓ, KRISZTINA</a> - CZAKKEL, ORSOLYA - GEISSLER, ERIK
0509	COAL FLY ASH DERIVED NANOCOMPOSITE FOR MERCURY REMOVAL FROM WASTEWATER <a href="#">TAUANOVA, ZHANDOS</a> - SHAH, DHAWAL - ITSKOS, GRIGORIOS - INGLEZAKIS, VASILEIOS - MIKHALOVSKA, LYUBA - MIKHALOVSKY, SERGEY
0511	RAPID ADSORPTION OF PRO-INFLAMMATORY CYTOKINES BY GRAPHENE NANOPATELETS AND THEIR COMPOSITES <a href="#">MIKHALOVSKY, SERGEY</a> - ZHENG, YISHAN - PESCATORE, NICHOLAS - GOGOTSI, YURY - DYATKIN, BORIS - INGAVLE, GANESH - MOCHALIN, VADYM - OZULUMBA, TOCHUKWU - SANDEMAN, SUSAN
0514	OPTIMIZATION OF PROCESSING PARAMETERS IN SOLUTION SPUN CNT FIBERS <a href="#">DEWEY, OLIVER</a> - TAYLOR, LAUREN - PASQUALI, MATTEO
0597	HYDROLYSIS OF CELLULOSE CATALYZED BY OXIDIZED CARBON POWDER <a href="#">TAKATSUKI, AKIRA</a> - NISHIHARA, HIROTOMO - HIRATANI, MASAHIKO - KANEEDA, MASATO - KURIHARA, YOSHIKI - KYOTANI, TAKASHI
0634	TOWARDS UNKNOWN - ARE ALL CNTS' SYNTHESIS PATHWAYS ALREADY KNOWN? <a href="#">ILNICKA, ANNA</a> - LUKASZEWICZ, JERZY
0663	SUSTAINABLE CARBON MATERIALS DERIVED FROM KRAFT BLACK LIQUOR <a href="#">AMARAL-LABAT, GISELE</a> - F. QUIRINO, SANDRO - R BALDAN, MAURICIO - LEAL DA SILVA, ELEN - CUNA, ANDRES - F. Malfatti, CELIA - L. MARCOS, RODRIGO - FB LENZ E SILVA, GUILHERME
0701	MECHANISMS OF CNTS GROWTH. UNDERSTANDING CHIRALITY, SHAPE, PENTAGON/HEPTAGON FORMATION CATALYSIS <a href="#">LOBO, LUIS</a>
0702	ANALYSIS OF BOUND POLYMER IN CARBON-RUBBER INTERFACE BY USING CARBON-COATED ALUMINA NANOPERTICLES AS A MODEL FILLER <a href="#">HOSHIKAWA, YASUTO</a> - KAWAGUCHI, REI - AKAHANE, HIDENOBU - ISHII, TAKAFUMI - HOSHINO, NORIHISA - AKUTAGAWA, TOMOYUKI - YAMADA, HIROSHI - KYOTANI, TAKASHI

## FROM NANO- TO MACRO-SCALE: HYBRID MAGNETIC CARBON NANOCOMPOSITES AS A TOOL FOR CATALYTIC WET PEROXIDE OXIDATION

### Introduction

There is a need for technological innovation in the water sector worldwide, as a result of the growing demand for water supplies – meeting increasingly restricted quality criteria, while coping with the increasing scarcity of clean water sources<sup>1</sup>. Under this context, the use of treated wastewater as an alternative water source has emerged as a topic of high priority<sup>2</sup>. However, meeting current quality requirements for wastewater reuse is a great challenge, in which nanotechnology holds a great potential<sup>1</sup>.

Catalytic wet peroxide oxidation (CWPO) is a promising water/wastewater treatment technology; it enables the formation of highly oxidizing hydroxyl radicals (HO<sup>•</sup>) under atmospheric pressure and low to moderate temperatures, when a suitable catalyst is employed for the decomposition of hydrogen peroxide (H<sub>2</sub>O<sub>2</sub>)<sup>3</sup>. However, further improvement of catalyst design is still required in order to allow the scale-up of the CWPO technology towards real-scale applications.

Bearing this in mind, our work has been focused on the development of highly active and stable hybrid magnetic carbon nanocomposites for CWPO. A detailed catalyst design at the nanoscale, based on the understanding of the surface reactions and interactions involved in the CWPO process, has recently allowed us to move forward towards the treatment of a real industrial wastewater with high pollutant load – collected from a mechanical biological treatment (MBT) plant for municipal solid waste processing. This communication reports the findings obtained in the last four years by our research group in this quest. A particular emphasis is given to the synergistic effects arising from the combination of iron-based catalysts with the easily tuned properties of carbon-based materials.

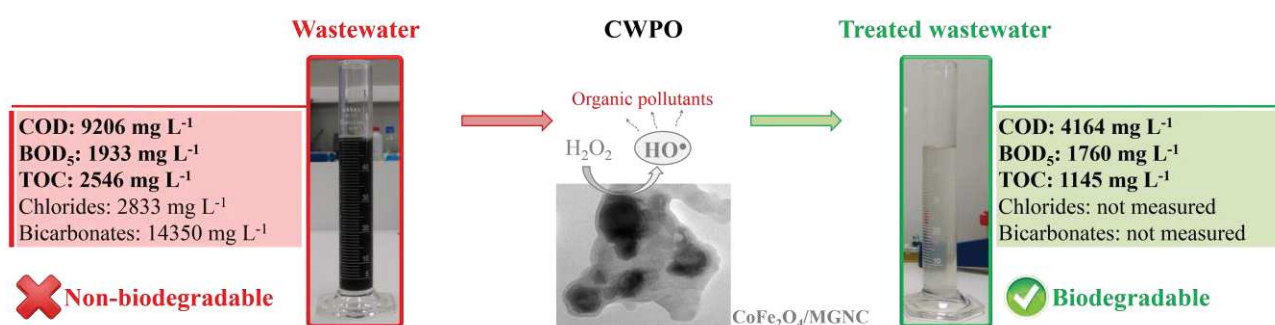

### Results and Discussion

A hybrid magnetic graphitic nanocomposite – composed by a magnetite core and a graphitic shell, was synthesized by hierarchical co-assembly of magnetite nanoparticles and carbon precursors. Following its application in CWPO, it was concluded about the role of the carbon shell. Specifically, the encapsulation of magnetite nanoparticles within carbon frameworks (i) enhances the catalytic activity in CWPO when compared to bare magnetite, while (ii) strongly limiting the leaching of iron species to the treated water. The first effect was ascribed to the increased adsorptive interactions between the carbon phase and the pollutant molecules, which enable a more intimate contact between the generated HO<sup>•</sup> radicals and the pollutant. The lower metal leaching obtained with the nanocomposite catalyst was ascribed to the confinement effect promoted by the carbon shell. As a result of these positive effects, very high pollutant mass removals were obtained with a rather high efficiency of H<sub>2</sub>O<sub>2</sub> consumption, and the composite catalyst was active for operating pH in the range 3 – 6<sup>4</sup>.

Seeking for catalyst optimization, the individual effects of the metal species employed in the nanostructured composites have been studied. It was found that the simultaneous incorporation of

cobalt and iron into carbon matrices (iii) increases the rate of  $\text{HO}^\bullet$  radicals formation, and (iv) promotes a more efficient reduction of  $\text{Fe}^{3+}$  to  $\text{Fe}^{2+}$ , thus limiting iron leaching<sup>5</sup>.

Based on the findings reported above, it was possible to design a high performance hybrid magnetic graphitic nanocomposite ( $\text{CoFe}_2\text{O}_4/\text{MGNC}$ ) – composed by a cobalt ferrite core and a graphitic shell. In this way, the positive effects described in (i) to (iv) were combined in the same nanocomposite material. It was found that the application of this new generation catalyst enables the treatment of waste waters with high pollutant loads, such as that from the MBT plant considered in this study (cf. **Figure 1**). The biodegradability of the wastewater was enhanced during the treatment performed at pH 6, regardless of its high organic and inorganic content; disinfection was achieved and the treated water revealed no toxicity against selected bacteria. The high stability of  $\text{CoFe}_2\text{O}_4/\text{MGNC}$  for CWPO was demonstrated in a series of five CWPO reaction/magnetic separation sequential experiments in the same vessel<sup>6</sup>.

**Figure 1.** Representation of the CWPO treatment performed in the presence of  $\text{CoFe}_2\text{O}_4/\text{MGNC}$ .

## Conclusions

The proper understanding of the catalyst properties at the nanoscale is fundamental in order to design materials with potential to be an effective tool for real-scale CWPO applications.

## Acknowledgment

This work was supported by: Project POCI-01-0145-FEDER-006984 – Associate Laboratory LSRE-LCM funded by FEDER through COMPETE2020 – Programa Operacional Competitividade e Internacionalização (POCI) – and by national funds through FCT – Fundação para a Ciência e a Tecnologia. R.S. Ribeiro acknowledges the FCT individual Ph.D. grant SFRH/BD/94177/2013, with financing from FCT and the European Social Fund (through POPH and QREN).
