# A Universidade do Porto no University Ranking by Academic Performance URAP - World Ranking 2015-2016

<http://www.urapcenter.org/2015/>

## 1. Metodologia do URAP – World Ranking 2015-2016 e participação da U.Porto

O URAP World Ranking é elaborado pelo Informatics Institute da Middle East Technical University, Turquia.

“University Ranking by Academic Performance (URAP) Research Laboratory was established at Informatics Institute of Middle East Technical University in 2009. Main objective of URAP is to develop a ranking system for the world universities based on academic performances which determined by quality and quantity of scholarly publications. In line with this objective yearly World Ranking of 2000 Higher Education Institutions have been released since 2010.”<sup>1</sup>

### “Aim and Scope

The URAP ranking system's focus is on academic quality. URAP has gathered data about 2,500 Higher Education Institutes (HEI) in an effort to rank these organizations by their academic performance. The overall score of each HEI is based upon its performance over several indicators which are described in the Ranking Indicators section. The ranking includes HEIs except for governmental academic institutions, e.g. the Chinese Academy of Science and the Russian Academy of Science, etc. Data for 2,500 HEIs have been processed and top 2,000 of them are scored. Thus, \*URAP covers approximately 10% of all HEIs in the world\*, which makes it one of the most comprehensive university ranking systems in the world.

URAP ranking system is completely based on objective data obtained from reliable open sources. The system ranks the universities according to multiple criteria. Most of the currently available ranking systems are both size and subject dependent. The URAP research team is currently working on a new methodology which will minimize the impact of size and subject dependency.

The goal of the URAP ranking system is not to label world universities as best or worst. Our intention is to help universities identify potential areas of progress with respect to specific academic performance indicators. Similar to other ranking systems, the URAP system is neither exhaustive nor definitive, and is open to new ideas and improvements. The current ranking system will be continuously upgraded based on our ongoing research and the constructive feedback of our colleagues.”<sup>2</sup>

### “World Ranking Indicators

URAP 2014-2015 [<sup>3</sup>] World Ranking is based on 6 academic performance indicators. Since URAP is an academic performance based ranking, publications constitute the basis of the ranking methodology. Both quality and quantity of publications and international research collaboration performance are used as indicators. The indicators, the data sources, and the duration of coverage are summarized in the table below.

<sup>1</sup> <http://www.urapcenter.org/2015/> Acedido 21 dezembro de 2015.

<sup>2</sup> <http://www.urapcenter.org/2015/methodology.php?q=2> Acedido 21 dezembro de 2015.

<sup>3</sup> A versão inglesa do site mantém as datas de referência da edição de 2014-2015.

Indicator	Objective	Coverage [3]	Source
<b>Article</b>	Current Scientific Productivity	2013	InCites
<b>Citation</b>	Research Impact	2011-2013	InCites
<b>Total Document</b>	Scientific Productivity	2011-2013	Web of Science
<b>Article Impact Total</b>	Research Quality	2011-2013	InCites
<b>Citation Impact Total</b>	Research Quality	2011-2013	InCites
<b>International Collaboration</b>	International Acceptance	2011-2013	InCites

A detailed description of each indicator is provided below:

**Article:** is a measure of current scientific productivity which includes articles published in 2013 and indexed by Web of Science and listed by Incites. Article number covers articles, reviews and notes. The weight of this indicator on the overall ranking is %21.

**Citation:** is a measure of research impact and scored according to the total number of citations received in 2011-2013 for the articles published in 2011-2013 and indexed by Web of Science. The effect of citation on the overall ranking is %21.

**Total Document :** is the measure of sustainability and continuity of scientific productivity and presented by the total document count which covers all scholarly literature including conference papers, reviews, letters, discussions, scripts in addition to journal articles published during 2011-2013 period. The weight of this indicator is %10.

**Article Impact Total (AIT):** is a measure of scientific productivity corrected by the institution's normalized CPP(1) with respect to the world CPP in 23 subject areas between 2011 and 2013. The ratio of the institution's CPP and the world CPP indicates whether the institution is performing above or below the world average in that field. This ratio is multiplied by the number of publications in that field and then summed across the 23 fields. which is summarized in the following formula:

$$AIT = \sum_{i=1}^{23} \left[ \left( \frac{CPP_i}{CPP\_World_i} \right) * Articles_i \right]$$

This indicator aims to balance the institution's scientific productivity with the field normalized impact generated by those publications in each field. The weight of this indicator is %18.

**Citation Impact Total (CIT):** is a measure of research impact corrected by the institution's normalized CPP with respect to the world CPP in 23 subject areas between 2011 and 2013. The ratio of the institution's CPP and the world CPP indicates whether the institution is performing above or below the world average in that field. This ratio is multiplied by the number of citations in that field and then summed across the 23 fields. This indicator aims to balance the institution's scientific impact with the field normalized impact generated by the publications in each field, , which is summarized in the following formula:

$$CIT = \sum_{i=1}^{23} \left[ \left( \frac{CPP_i}{CPP\_World_i} \right) * Citations_i \right]$$

The contribution of this indicator to the overall ranking is %15.

**International Collaboration:** is a measure of global acceptance of a university. International collaboration data, which is based on the total number of publications made in collaboration with foreign universities, is obtained from InCites for the years 2011-2013. The weight of this indicator is %15 in the overall ranking. For the 2014 URAP World Ranking, bibliometric data is obtained through Thomson Reuters' InCites research analytics service(2), which provides an interface to the Web of Science database. The 23 subject areas used in the ranking are based on the discipline classification matrix developed by the Australian Research Council for journals indexed in Web of Science(3)

(1)CPP stands for citation per publication

(2)<http://researchanalytics.thomsonreuters.com/incites>

<sup>3</sup> A versão inglesa do site mantém as datas de referência da edição de 2014-2015. Deve ler-se "2014" em substituição de "2013" e "2012-2014" em substituição de "2011-2013".

<sup>4</sup> <http://www.urapcenter.org/2015/methodology.php?q=3#> Acedido 21 dezembro 2015.

### **“Data Collection & Scoring**

Data is gathered from Web of Science and other sources which provide lists of HEIs. 2500 HEIs with highest number of publications were initially considered, and 2000 of them were ranked after data processing. Reliability of ranking depends mostly on the quality of the data used. In order to provide reliable data, pre-processing and data cleaning techniques were employed.

Statistical analysis indicated that the raw bibliometric data underlying our indicators had highly skewed distributions. Therefore, the indicator values above and below the median are linearly scored in two groups. The Delphi system was conducted with a group of experts to assign weighting scores to the indicators. Total score of 600 is distributed to each indicator as follows:

Article: % 21

Total Document: % 10

Citation: %21

Article Impact Total: %18

Citation Impact Total: %15

International Collaboration: %15<sup>5</sup>
